

The background of the slide is a stylized sunset or sunrise scene. It features a large, bright yellow sun partially obscured by a white circle. The sky is a gradient of orange and yellow, with several small, dark silhouettes of birds flying. In the foreground, there are dark silhouettes of various trees, including evergreens and a large, leafy deciduous tree on the right. The overall color palette is warm, dominated by oranges, yellows, and dark browns.

SUN DAMAGE AND SUNBURNS

By: Aqsa Malik, Adrianna Karistinos, Raazia Shoab and Mannat
Dhingra

TABLE OF CONTENTS

Introduction	Some basic information
Cause	Talking about how sunburn and sun damage is caused
Symptoms & Effects	How to know if you suffer from sun damage, and what happens
Prevention & Treatments	What can be done to prevent it?
Website Tour	See our website in action

A stylized landscape illustration. The background is a warm yellow-orange gradient. In the center, a large white circle represents the sun or moon. Below it, there are dark brown, jagged mountain peaks. To the left and right of the central sun, there are more rounded, orange-brown hills. In the foreground, there are dark brown, grassy slopes with some small, dark brown plants. Several small, dark brown birds are flying in the sky. The word "INTRODUCTION" is written in a bold, black, sans-serif font across the middle of the image, partially overlapping the white circle.

INTRODUCTION

WHAT IS IT?

- **SUN DAMAGE** - UV light hits unprotected skin, causing damage
- **SUNBURN** - Inflammatory reaction on the skin from the sun
 - Melanin - the cells that gives pigment to our skin

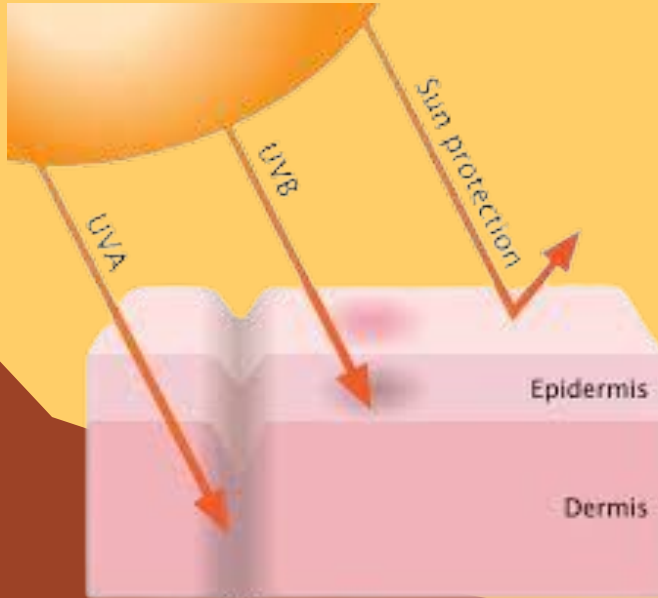

CAUSES

WHY IT HAPPENS

- The UV light damages the skin cells
- It changes the DNA in the body and increases blood flow

Types of UV Radiation

- **UVA**
 - Penetrates through all layers of skin
- **UVB**
 - Damages the outer layer

DID YOU KNOW?

Skin cancer holds the distinction of being the most frequently identified malignancy within Canada, with its prevalence on an upward trajectory.

Approximately 65% of melanoma instances are attributable to ultraviolet radiation exposure. Furthermore, the occurrence rates of melanoma in Canada rank among the most elevated globally.

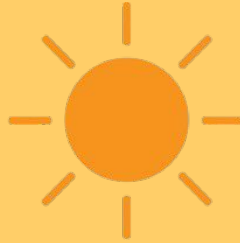

SYMPTOMS AND EFFECTS

WHAT CHANGES?

DAMAGE IS NOT IMMEDIATELY VISIBLE. PHYSICAL SYMPTOMS WILL APPEAR OVER TIME

SOME OVERALL EFFECTS:

1. Wrinkling
2. Pigmentation changes
3. Loss of skin tone
4. Loss of Elasticity
5. Rough surface
6. Redness
7. Blochness

The background is a stylized desert landscape. It features a large, bright yellow sun or moon in the center, partially obscured by a large white circle. The sky is a warm orange-yellow color with several small, dark silhouettes of birds flying. The foreground consists of dark brown, rocky terrain with several saguaro cacti of varying sizes. In the background, there are rolling hills and a large, reddish-brown rock formation on the right side. The overall style is flat and graphic, with a warm color palette of oranges, yellows, and browns.

PREVENTION & TREATMENT

WHAT CAN YOU DO?

1. **WEAR SUNSCREEN**
 - THIS IS THE MOST IMPORTANT
2. **Limits the exposure of sunlight**
 - Find shade when possible
3. **Clothes Matter**
 - Cover yourself up
 - Wear a hat
4. **Consult your dermatologist**
 - They can provide more information relevant to you

ANY TREATMENT?

1. Lasers

- Minimizes the appearance of hyperpigmentation and wrinkles from sun damage

2. Chemical Peel

- Removes brown spots and improves tone

3. Photodynamic Therapy

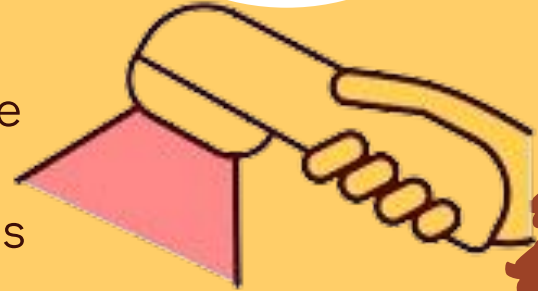

- Preemptively removes precancerous cells

4. Topical Medication

- Helps even out skin tone and texture

5. Cryotherapy

- Freezes cancerous spots
